# Opening Question

# Outline 大綱

- 1. Point One (ref)
- 2. Point Two
- 3. Point Three

 $hat(f)(omega) = int_-oo^oo f(x)e^(-2pi)$ x omega) dx

#### Code Block

```
class BST:
def __init__(self):
   self.root = None
def search(self, key): # iterative search
   cur = self.root
   while (cur != None):
     if key < cur.key: cur = cur.left
     else if key > cur.key: cur = cur.right
     else: return cur
```

## Flexbox Layout

- Multi-col layout!
- 1/3 width for text
- imgbox div
